

Converteam awarded a contract for the Shanjing II Gas Pipeline project in China

On February 27, 2008, Converteam was awarded an order for the Xinxian station, one of the compression stations of the Shanjing II Pipeline Project in China managed by Huayou Gas Transport Company.

Converteam's scope of supply includes 3 sets of Variable Speed Drive Systems to run 3 compression trains. Each set will mainly consist of isolation transformers, LCI drives, 17.2MW synchronous motors, harmonic filters, MV switchgear, LV distribution panels & coolers.

This project can be considered a real breakthrough following months of successful coordination between Converteam SAS and Converteam China, thus allowing Converteam to enter the potentially loaded Oil & Gas market of China and opening the door to many future projects.
